## Datasheet for ABIN1610946 RPL39 Protein (AA 2-51) (His tag)

Overview

| Quantity:                     | 1 mg   |
|-------------------------------|--|
| Target:                       | RPL39  |
| Protein Characteristics:      | AA 2-51                                      |
| Origin:                       | Yeast (Kluyveromyces)                        |
| Source:                       | Yeast  |
| Protein Type:                 | Recombinant                                  |
| Purification tag / Conjugate: | This RPL39 protein is labelled with His tag. |
| Application:                  | ELISA  |

## Product Details

| Sequence:         | AAKKSFIIK QKLAKAKNQN RPLPQWFRLK TNNTIRYNAK RRHWRRTKLV C  |
|-------------------|--|
| Specificity:      | Kluyveromyces marxianus (Yeast) (Candida kefyr)  |
| Characteristics:  | Please inquire if you are interested in this recombinant protein expressed in E. coli, mammalien cells or by baculovirus infection. Be aware about differences in price and lead time. |
| Purity:           | > 90 %   |
| Target Details    |  |
| Target:           | RPL39  |
| Alternative Name: | 60S ribosomal protein L39 (RPL39) (RPL39 Products)   |
| Background:       | Recommended name: 60S ribosomal protein L39.   |

| Target Details      |  |
|---------------------|--|
|                     | Alternative name(s): L46   |
| UniProt:            | P48536   |
| Application Details |  |
| Comment:            | The yeast protein expression system is the most economical and efficient eukaryotic system for secretion and intracellular expression. A protein expressed by the mammalian cell system is   |
| Restrictions:       | of very high-quality and close to the natural protein. But the low expression level, the high cost<br>of medium and the culture conditions restrict the promotion of mammalian cell expression<br>systems. The yeast protein expression system serve as a eukaryotic system integrate the<br>advantages of the mammalian cell expression system. A protein expressed by yeast system<br>could be modificated such as glycosylation, acylation, phosphorylation and so on to ensure the<br>native protein conformation. It can be used to produce protein material with high added value<br>that is very close to the natural protein. Our proteins produced by yeast expression system has<br>been used as raw materials for downstream preparation of monoclonal antibodies.<br>For Research Use only |
| Handling            |  |
| Format:             | Lyophilized  |
| Concentration:      | 0.2-2 mg/mL  |
| Buffer:             | Tris-based buffer, 50 % glycerol   |
| Handling Advice:    | Repeated freezing and thawing is not recommended. Store working aliquots at 4 °C for up to one week  |
| Storage:            | -20 °C   |
| Storage Comment:    | Store at -20 °C, for extended storage, conserve at -20 °C or -80 °C.   |
