| Application Details |  |
| Comment:            | The yeast protein expression system is the most economical and efficient eukaryotic system         |
|                     | for secretion and intracellular expression. A protein expressed by the mammalian cell system is    |
|                     | of very high-quality and close to the natural protein. But the low expression level, the high cost |
|                     | of medium and the culture conditions restrict the promotion of mammalian cell expression           |
|                     | systems. The yeast protein expression system serve as a eukaryotic system integrate the            |
|                     | advantages of the mammalian cell expression system. A protein expressed by yeast system            |
|                     | could be modificated such as glycosylation, acylation, phosphorylation and so on to ensure the     |
|                     | native protein conformation. It can be used to produce protein material with high added value      |
|                     | that is very close to the natural protein. Our proteins produced by yeast expression system has    |
|                     | been used as raw materials for downstream preparation of monoclonal antibodies.                    |
| Restrictions:       | For Research Use only  |
| Handling            |  |
