antibodies

## Datasheet for ABIN1617754 **Thiocyanate Methyltransferase 1 Protein (HOL1) (AA 1-246) (His tag)**

Overview

| Quantity:                     | 1 mg                                                                                             |
|-------------------------------|--------------------------------------------------------------------------------------------------|
| Target:                       | Thiocyanate Methyltransferase 1 (HOL1)                                                           |
| Protein Characteristics:      | AA 1-246                                                                                         |
| Origin:                       | Arabidopsis thaliana                                                                             |
| Source:                       | Yeast                                                                                            |
| Protein Type:                 | Recombinant                                                                                      |
| Purification tag / Conjugate: | This Thiocyanate Methyltransferase 1 protein is labelled with His tag.                           |
| Application:                  | ELISA                                                                                            |
| Product Details               |                                                                                                  |
| Sequence:                     | MAEEQQNSDQ SNGGNVIPTP EEVATFLHKT VEEGGWEKCW EEEITPWDQG RATPLIVHLV                                |
|                               | DTSSLPLGRA LVPGCGGGHD VVAMASPERF VVGLDISESA LAKANETYGS SPKAEYFSFV                                |
|                               | KEDVFTWRPT ELFDLIFDYV FFCAIEPEMR PAWAKSMYEL LKPDGELITL MYPITDHVGG                                |
|                               | PPYKVDVSTF EEVLVPIGFK AVSVEENPHA IPTRQREAGK VEEDQLIPKK EILLFGKSVI CVIYKE                         |
| Specificity:                  | Arabidopsis thaliana (Mouse-ear cress)                                                           |
| Characteristics:              | Please inquire if you are interested in this recombinant protein expressed in E. coli, mammalien |
|                               | cells or by baculovirus infection. Be aware about differences in price and lead time.            |
| Purity:                       | > 90 %                                                                                           |
| Target Details                |                                                                                                  |

Target:

Thiocyanate Methyltransferase 1 (HOL1)

| Abstract:      | HOL1 Products                                                                                                                                        |
| Background:    | Recommended name: Thiocyanate methyltransferase 1.<br>EC= 2.1.1.n4.<br>Alternative name(s): Protein HARMLESS TO OZONE LAYER 1.<br>Short name= AtHOL1 |
| UniProt:       | Q0WP12                                                                                                                                               |

## Application Details

| Comment: | The yeast protein expression system is the most economical and efficient eukaryotic system         |
|----------|----------------------------------------------------------------------------------------------------|
|          | for secretion and intracellular expression. A protein expressed by the mammalian cell system is    |
|          | of very high-quality and close to the natural protein. But the low expression level, the high cost |
|          | of medium and the culture conditions restrict the promotion of mammalian cell expression           |
|          | systems. The yeast protein expression system serve as a eukaryotic system integrate the            |
|          | advantages of the mammalian cell expression system. A protein expressed by yeast system            |
|          | could be modificated such as glycosylation, acylation, phosphorylation and so on to ensure the     |
|          | native protein conformation. It can be used to produce protein material with high added value      |
|          | that is very close to the natural protein. Our proteins produced by yeast expression system has    |
|          | been used as raw materials for downstream preparation of monoclonal antibodies.                    |
|          |                                                                                                    |

## Handling

| Format:          | Lyophilized                                                                                         |
|------------------|-----------------------------------------------------------------------------------------------------|
| Concentration:   | 0.2-2 mg/mL                                                                                         |
| Buffer:          | Tris-based buffer, 50 % glycerol                                                                    |
| Handling Advice: | Repeated freezing and thawing is not recommended. Store working aliquots at 4 °C for up to one week |
| Storage:         | -20 °C                                                                                              |
| Storage Comment: | Store at -20 °C, for extended storage, conserve at -20 °C or -80 °C.                                |
