Application Details

| st protein expression system is the most economical and efficient eukaryotic system |
|---|
| etion and intracellular expression. A protein expressed by the mammalian cell system is |
| igh-quality and close to the natural protein. But the low expression level, the high cost |
| um and the culture conditions restrict the promotion of mammalian cell expression |
| . The yeast protein expression system serve as a eukaryotic system integrate the |
| ges of the mammalian cell expression system. A protein expressed by yeast system |
| e modificated such as glycosylation, acylation, phosphorylation and so on to ensure the |
| rotein conformation. It can be used to produce protein material with high added value |
| ery close to the natural protein. Our proteins produced by yeast expression system has |
| ed as raw materials for downstream preparation of monoclonal antibodies. |
