Comment: The yeast protein expression system is the most economical and efficient eukaryor for secretion and intracellular expression. A protein expressed by the mammalian of very high-quality and close to the natural protein. But the low expression level, the of medium and the culture conditions restrict the promotion of mammalian cell ex- systems. The yeast protein expression system serve as a eukaryotic system integ advantages of the mammalian cell expression system. A protein expressed by year could be modificated such as glycosylation, acylation, phosphorylation and so on native protein conformation. It can be used to produce protein material with high a that is very close to the natural protein.
