Application Details

st protein expression system is the most economical and efficient eukaryotic system
etion and intracellular expression. A protein expressed by the mammalian cell system is
igh-quality and close to the natural protein. But the low expression level, the high cost
um and the culture conditions restrict the promotion of mammalian cell expression
. The yeast protein expression system serve as a eukaryotic system integrate the
ges of the mammalian cell expression system. A protein expressed by yeast system
e modificated such as glycosylation, acylation, phosphorylation and so on to ensure the
rotein conformation. It can be used to produce protein material with high added value
ery close to the natural protein. Our proteins produced by yeast expression system has
ed as raw materials for downstream preparation of monoclonal antibodies.
