|-------------------|--|
| Alternative Name: | Doublesex- and mab-3-related transcription factor 1A (dmrt1-a) (DMRT1 Products) |
| Background: | Recommended name: Doublesex- and mab-3-related transcription factor 1A. Short name= xDmrt1. Alternative name(s): DMRT1-alpha |
| UniProt: | Q3LH63 |

Application Details

| The yeast protein expression system is the most economical and efficient eukaryotic system |
|--|
| for secretion and intracellular expression. A protein expressed by the mammalian cell system is |
| of very high-quality and close to the natural protein. But the low expression level, the high cost |
| of medium and the culture conditions restrict the promotion of mammalian cell expression |
| systems. The yeast protein expression system serve as a eukaryotic system integrate the |
| advantages of the mammalian cell expression system. A protein expressed by yeast system |
| could be modificated such as glycosylation, acylation, phosphorylation and so on to ensure the |
| native protein conformation. It can be used to produce protein material with high added value |
| that is very close to the natural protein. Our proteins produced by yeast expression system has |
| been used as raw materials for downstream preparation of monoclonal antibodies. |
