Application Details

for secretion and intracellular expression. A protein expressed by th	2
	anaion loval the high aget
of very high-quality and close to the natural protein. But the low exp	ession level, the high cost
of medium and the culture conditions restrict the promotion of man	malian cell expression
systems. The yeast protein expression system serve as a eukaryotic	system integrate the
advantages of the mammalian cell expression system. A protein ex	pressed by yeast system
could be modificated such as glycosylation, acylation, phosphorylat	on and so on to ensure the
native protein conformation. It can be used to produce protein mate	rial with high added value
that is very close to the natural protein. Our proteins produced by ye	ast expression system has
been used as raw materials for downstream preparation of monocle	onal antibodies.
