Datasheet for ABIN1631673 SGK1 Protein (AA 1-431) (His tag)

Overview	
Quantity:	1 mg
Target:	SGK1
Protein Characteristics:	AA 1-431
Origin:	Cynomolgus
Source:	Yeast
Protein Type:	Recombinant
Purification tag / Conjugate:	This SGK1 protein is labelled with His tag.
Application:	ELISA

Target Details

Target:	SGK1
Alternative Name:	Serine/threonine-protein kinase Sgk1 (SGK1) (SGK1 Products)
Background:	Recommended name: Serine/threonine-protein kinase Sgk1. EC= 2.7.11.1. Alternative name(s): Serum/glucocorticoid-regulated kinase 1
UniProt:	Q4R633
Pathways:	MAPK Signaling, Notch Signaling, Steroid Hormone Mediated Signaling Pathway

Application Details

Comment:	The yeast protein expression system is the most economical and efficient eukaryotic system
	for secretion and intracellular expression. A protein expressed by the mammalian cell system is
	of very high-quality and close to the natural protein. But the low expression level, the high cost
	of medium and the culture conditions restrict the promotion of mammalian cell expression
	systems. The yeast protein expression system serve as a eukaryotic system integrate the
	advantages of the mammalian cell expression system. A protein expressed by yeast system
	could be modificated such as glycosylation, acylation, phosphorylation and so on to ensure the
	native protein conformation. It can be used to produce protein material with high added value
	that is very close to the natural protein. Our proteins produced by yeast expression system has
	been used as raw materials for downstream preparation of monoclonal antibodies.
