CLPX Protein (AA 57-633) (His tag)

Go to Product page

()	1/0	r\ /1	014	
()	ve	I V I	-v	V

Quantity:	1 mg
Target:	CLPX
Protein Characteristics:	AA 57-633
Origin:	Rat
Source:	Yeast
Protein Type:	Recombinant
Purification tag / Conjugate:	This CLPX protein is labelled with His tag.
Application:	ELISA

Application:	ELISA	
Product Details		
Sequence:	FSET PAYFASKDGT NKDGSGDGNK KSVTEGSSKK SGSGNSGKGG NQLRCPKCGD

	KEVVEGKKEP GYIRAPSKES SEEDYDSGVE EDGWPRQADA ANS	
Specificity:	Rattus norvegicus (Rat)	
Characteristics:	Please inquire if you are interested in this recombinant protein expressed in E. coli, mammalien	

Product Details

of very high-quality and close to the natural protein. But the low expression level, the high cost of medium and the culture conditions restrict the promotion of mammalian cell expression systems. The yeast protein expression system serve as a eukaryotic system integrate the advantages of the mammalian cell expression system. A protein expressed by yeast system could be modificated such as glycosylation, acylation, phosphorylation and so on to ensure the native protein conformation. It can be used to produce protein material with high added value	Product Details		
Target: CLPX Atternative Name: ATP-dependent Clp protease ATP-binding subunit dipX-like, mitochondrial (Clpx) (CLPX Products) Background: Recommended name: ATP-dependent Clp protease ATP-binding subunit dipX-like, mitochondrial UniProt: Q5U2U0 Application Details Comment: The yeast protein expression system is the most economical and efficient eukaryotic system for secretion and intracellular expression. A protein expressed by the mammalian cell system of very high-quality and close to the natural protein. But the low expression level, the high cost of medium and the culture conditions restrict the promotion of mammalian cell expression systems. The yeast protein expression system serve as a eukaryotic system integrate the advantages of the mammalian cell expression system. A protein expressed by yeast system could be modificated such as glycosylation, acylation, phosphorylation and so on to ensure the native protein conformation. It can be used to produce protein material with high added value that is very close to the natural protein. Our proteins produced by yeast expression system habeen used as raw materials for downstream preparation of monoclonal antibodies. Restrictions: For Research Use only Handling Format: Lyophilized Concentration: 0.2-2 mg/mL. Buffer: Tris-based buffer, 50 % glycerol Handling Advice: Repeated freezing and thawing is not recommended. Store working aliquots at 4 °C for up to		cells or by baculovirus infection. Be aware about differences in price and lead time.	
Target: CLPX AIternative Name: ATP-dependent Clp protease ATP-binding subunit clpX-like, mitochondrial (Clpx) (CLPX Products) Background: Recommended name: ATP-dependent Clp protease ATP-binding subunit clpX-like, mitochondrial UniProt: QSU2U0 Application Details Comment: The yeast protein expression system is the most economical and efficient eukaryotic system for secretion and intracellular expression. A protein expressed by the mammalian cell system of very high-quality and close to the natural protein. But the low expression level, the high cost of medium and the culture conditions restrict the promotion of mammalian cell expression systems. The yeast protein expression system serve as a eukaryotic system integrate the advantages of the mammalian cell expression system. A protein expressed by yeast system could be modificated such as glycosylation, acylation, phosphorylation and so on to ensure the native protein conformation.
