## Datasheet for ABIN1637312 KARS Protein (AA 1-495) (His tag)

Overview

| Quantity:                     | 1 mg  |
|-------------------------------|---|
| Target:                       | KARS  |
| Protein Characteristics:      | AA 1-495                                    |
| Origin:                       | Staphylococcus epidermidis                  |
| Source:                       | Yeast                                       |
| Protein Type:                 | Recombinant                                 |
| Purification tag / Conjugate: | This KARS protein is labelled with His tag. |
| Application:                  | ELISA                                       |

### Target Details

| Target:           | KARS  |
|-------------------|---|
| Alternative Name: | LysinetRNA ligase (lysS) (KARS Products)    |
| Background:       | Recommended name: LysinetRNA ligase.        |
|                   | EC= 6.1.1.6.                                |
|                   | Alternative name(s): Lysyl-tRNA synthetase. |
|                   | Short name= LysRS                           |
| UniProt:          | Q8CQV5                                      |

# Application Details

| Comment: | The yeast protein expression system is the most economical and efficient eukaryotic system         |
|----------|--|
|          | for secretion and intracellular expression. A protein expressed by the mammalian cell system is    |
|          | of very high-quality and close to the natural protein. But the low expression level, the high cost |
|          | of medium and the culture conditions restrict the promotion of mammalian cell expression           |
|          | systems. The yeast protein expression system serve as a eukaryotic system integrate the            |
|          | advantages of the mammalian cell expression system. A protein expressed by yeast system            |
|          | could be modificated such as glycosylation, acylation, phosphorylation and so on to ensure the     |
|          | native protein conformation. It can be used to produce protein material with high added value      |
|          | that is very close to the natural protein. Our proteins produced by yeast expression system has    |
|          | been used as raw materials for downstream preparation of monoclonal antibodies.                    |
|          |  |

Restrictions:

For Research Use only

### Handling

| Format:          | Lyophilized   |
|------------------|---|
| Concentration:   | 0.2-2 mg/mL   |
| Buffer:          | Tris-based buffer, 50 % glycerol  |
| Handling Advice: | Repeated freezing and thawing is not recommended. Store working aliquots at 4 °C for up to one week |
| Storage:         | -20 °C  |
