#### Application Details

| of medium and the culture conditions restrict the promotion of mammalian cell expression systems. The yeast protein expression system serve as a eukaryotic system integrate the |

| advantages of the mammalian cell expression system. A protein expressed by yeast system  |
| could be modificated such as glycosylation, acylation, phosphorylation and so on to ensure the   |
| native protein conformation. It can be used to produce protein material with high added value  |
| that is very close to the natural protein. Our proteins produced by yeast expression system has  |
| been used as raw materials for downstream preparation of monoclonal antibodies.  |
