Target Details

| Target: | LHX3 |
|-------------------|--|
| Alternative Name: | LIM/homeobox protein Lhx3 (lhx3) (LHX3 Products) |
| Background: | Recommended name: LIM/homeobox protein Lhx3. Short name= LIM homeobox protein 3. Alternative name(s): Homeobox protein LIM-3 |
| UniProt: | Q90421 |

Application Details

| The yeast protein expression system is the most economical and efficient eukaryotic system |
|--|
| for secretion and intracellular expression. A protein expressed by the mammalian cell system is |
| of very high-quality and close to the natural protein. But the low expression level, the high cost |
| of medium and the culture conditions restrict the promotion of mammalian cell expression |
| systems. The yeast protein expression system serve as a eukaryotic system integrate the |
| advantages of the mammalian cell expression system. A protein expressed by yeast system |
| could be modificated such as glycosylation, acylation, phosphorylation and so on to ensure the |
| native protein conformation. It can be used to produce protein material with high added value |
| that is very close to the natural protein. Our proteins produced by yeast expression system has |
| been used as raw materials for downstream preparation of monoclonal antibodies. |

Handling

| Format: | Lyophilized |
|------------------|---|
| Concentration: | 0.2-2 mg/mL |
| Buffer: | Tris-based buffer, 50 % glycerol |
| Handling Advice: | Repeated freezing and thawing is not recommended. Store working aliquots at 4 °C for up to one week |
| Storage: | -20 °C |
| Storage Comment: | Store at -20 °C, for extended storage, conserve at -20 °C or -80 °C. |
