Target Details	
Alternative Name:	Thioredoxin-like protein CDSP32, chloroplastic (CDSP32) (CDSP32 Products)
Background:	Recommended name: Thioredoxin-like protein CDSP32, chloroplastic. Alternative name(s): Chloroplastic drought-induced stress protein of 32 KDa. Short name= AtCDSP32
UniProt:	Q9SGS4
Application Details	
Comment:	The yeast protein expression system is the most economical and efficient eukaryotic system
	for secretion and intracellular expression. A protein expressed by the mammalian cell system is
	of very high-quality and close to the natural protein. But the low expression level, the high cost
	of medium and the culture conditions restrict the promotion of mammalian cell expression
	systems. The yeast protein expression system serve as a eukaryotic system integrate the
	advantages of the mammalian cell expression system. A protein expressed by yeast system
	could be modificated such as glycosylation, acylation, phosphorylation and so on to ensure the
	native protein conformation. It can be used to produce protein material with high added value

that is very close to the natural protein. Our proteins produced by yeast expression system has been used as raw materials for downstream preparation of monoclonal antibodies.
