## Datasheet for ABIN1656570 Glycine-Rich RNA-Binding Protein 2 (GR-RBP2) (AA 1-48) protein (His tag)

Overview

| Quantity:                     | 1 mg   |
|-------------------------------|--|
| Target:                       | Glycine-Rich RNA-Binding Protein 2 (GR-RBP2) |
| Protein Characteristics:      | AA 1-48                                      |
| Origin:                       | Poplar (Populus)                             |
| Source:                       | Yeast  |
| Protein Type:                 | Recombinant                                  |
| Purification tag / Conjugate: | His tag                                      |
| Application:                  | ELISA  |

## Product Details

| Sequence:         | GIINDRETGR SRGFGFVTFN NEKGFGFVTF NNEKGFGFVT FNNEKSMR   |
|-------------------|--|
| Specificity:      | Populus euphratica (Euphrates poplar)  |
| Characteristics:  | Please inquire if you are interested in this recombinant protein expressed in E. coli, mammalien cells or by baculovirus infection. Be aware about differences in price and lead time. |
| Purity:           | > 90 %   |
| Target Details    |  |
| Target:           | Glycine-Rich RNA-Binding Protein 2 (GR-RBP2)   |
| Alternative Name: | Glycine-rich RNA-binding protein 2 (GR-RBP2 Products)  |
| Background:       | Recommended name: Glycine-rich RNA-binding protein 2   |

| Target Details      |  |
|---------------------|--|
| UniProt:            | P84976   |
| Application Details |  |
| Comment:            | The yeast protein expression system is the most economical and efficient eukaryotic system<br>for secretion and intracellular expression. A protein expressed by the mammalian cell system is<br>of very high-quality and close to the natural protein. But the low expression level, the high cost<br>of medium and the culture conditions restrict the promotion of mammalian cell expression<br>systems. The yeast protein expression system serve as a eukaryotic system integrate the<br>advantages of the mammalian cell expression system. A protein expressed by yeast system<br>could be modificated such as glycosylation, acylation, phosphorylation and so on to ensure the<br>native protein conformation. It can be used to produce protein material with high added value<br>that is very close to the natural protein. Our proteins produced by yeast expression system has<br>been used as raw materials for downstream preparation of monoclonal antibodies. |
| Restrictions:       | For Research Use only  |
| Handling            |  |
| Format:             | Lyophilized  |
| Concentration:      | 0.2-2 mg/mL  |
| Buffer:             | Tris-based buffer, 50 % glycerol   |
| Handling Advice:    | Repeated freezing and thawing is not recommended. Store working aliquots at 4 °C for up to one week  |
| Storage:            | -20 °C   |
| Storage Comment:    | Store at -20 °C, for extended storage, conserve at -20 °C or -80 °C.   |
