## Application Details

e yeast protein expression system is the most economical and efficient eukaryotic system
r secretion and intracellular expression. A protein expressed by the mammalian cell system is
very high-quality and close to the natural protein. But the low expression level, the high cost
medium and the culture conditions restrict the promotion of mammalian cell expression
stems. The yeast protein expression system serve as a eukaryotic system integrate the
vantages of the mammalian cell expression system. A protein expressed by yeast system
uld be modificated such as glycosylation, acylation, phosphorylation and so on to ensure the
tive protein conformation. It can be used to produce protein material with high added value
at is very close to the natural protein. Our proteins produced by yeast expression system has
en used as raw materials for downstream preparation of monoclonal antibodies.
