Target Details

Target:	PLVAP
Alternative Name:	Plasmalemma vesicle-associated protein (Plvap) (PLVAP Products)
Background:	Recommended name: Plasmalemma vesicle-associated protein. Alternative name(s): Plasmalemma vesicle protein 1. Short name= PV-1 gp68
UniProt:	Q9WV78

Application Details

Comment:	The yeast protein expression system is the most economical and efficient eukaryotic system
	for secretion and intracellular expression. A protein expressed by the mammalian cell system is
	of very high-quality and close to the natural protein. But the low expression level, the high cost
	of medium and the culture conditions restrict the promotion of mammalian cell expression
	systems. The yeast protein expression system serve as a eukaryotic system integrate the
	advantages of the mammalian cell expression system. A protein expressed by yeast system
	could be modificated such as glycosylation, acylation, phosphorylation and so on to ensure the
	native protein conformation. It can be used to produce protein material with high added value
	that is very close to the natural protein. Our proteins produced by yeast expression system has
	been used as raw materials for downstream preparation of monoclonal antibodies.
