ATP-Binding Protein p29 Protein (AA 1-252) (His tag)

\sim	
()\/\	rview
\cup	1 410 44

ND Specificity: Mycoplasma hyorhinis	OVEIVIEW	
Protein Characteristics: AA 1-252 Origin: Mycoplasma Source: Yeast Protein Type: Recombinant Purification tag / Conjugate: This ATP-Binding Protein p29 protein is labelled with His tag. Application: ELISA Product Details Sequence: MKKPLNKLEI KNLTFKNKND DYIILKNLNL DINSDKVLFL LGSSGQGKSS LLKTILKQTD VIEGTILFNK QDIFQLNKKE WKSFLKEVSF LNQTTTSIPF ETVFTNIVRS LQDYKNLFYN IFNLVSKSQK EEITSVLKEL NILDKIYHRV DSLSGGQQQR VEIAKLMMQK PKIIIADEPT NFLDPNISKN IIELIIKMAK KFNSILIIVT HNVNLIHEFD SSILLIKNQE YHFYKSNKEI NSNILDG ND Specificity: Mycoplasma hyorhinis Characteristics: Please inquire if you are interested in this recombinant protein expressed in E. coli, mamicells or by baculovirus infection. Be aware about differences in price and lead time.	Quantity:	1 mg

cells or by baculovirus infection. Be aware about differences in price and lead time.	Specificity:	Mycoplasma hyorhinis
	Characteristics:	Please inquire if you are interested in this recombinant protein expressed in E. coli, mammalien
Purity: > 90 %		cells or by baculovirus infection. Be aware about differences in price and lead time.
	Purity:	> 90 %

Target Details

Target:	ATP-Binding Protein p29 (P29)
Alternative Name:	Probable ABC transporter ATP-binding protein p29 (P29 Products)
Background:	Recommended name: Probable ABC transporter ATP-binding protein p29
UniProt:	P15361

Application Details

Comment:

The yeast protein expression system is the most economical and efficient eukaryotic system for secretion and intracellular expression. A protein expressed by the mammalian cell system is of very high-quality and close to the natural protein. But the low expression level, the high cost of medium and the culture conditions restrict the promotion of mammalian cell expression systems. The yeast protein expression system serve as a eukaryotic system integrate the advantages of the mammalian cell expression system. A protein expressed by yeast system could be modificated such as glycosylation, acylation, phosphorylation and so on to ensure the native protein conformation. It can be used to produce protein material with high added value that is very close to the natural protein. Our proteins produced by yeast expression system has been used as raw materials for downstream preparation of monoclonal antibodies.

Restrictions:

For Research Use only

Handling

Format:	Lyophilized
Concentration:	0.2-2 mg/mL
Buffer:	Tris-based buffer, 50 % glycerol
Handling Advice:	Repeated freezing and thawing is not recommended. Store working aliquots at 4 °C for up to one week
Storage:	-20 °C
Storage Comment:	Store at -20 °C, for extended storage, conserve at -20 °C or -80 °C.
