## Datasheet for ABIN1663738 BOLA Protein (AA 1-103) (His tag)

| Overview                      |  |
|-------------------------------|--|
| Quantity:                     | 1 mg   |
| Target:                       | BOLA   |
| Protein Characteristics:      | AA 1-103   |
| Origin:                       | Haemophilus influenzae   |
| Source:                       | Yeast  |
| Protein Type:                 | Recombinant  |
| Purification tag / Conjugate: | This BOLA protein is labelled with His tag.  |
| Application:                  | ELISA  |
| Product Details               |  |
| Sequence:                     | MSIQQIIEQK IQKEFQPHFL AIENESHLHH SNRGSESHFK CVIVSADFKN IRKVQRHQRI                                |
|                               | YQLLNEELNH SIHALALHLF TPEEWKAQNE TVPHSTKCAG IGR  |
| Specificity:                  | Haemophilus influenzae (strain ATCC 51907 / DSM 11121 / KW20 / Rd)                               |
| Characteristics:              | Please inquire if you are interested in this recombinant protein expressed in E. coli, mammalien |
|                               | cells or by baculovirus infection. Be aware about differences in price and lead time.            |
| Purity:                       | > 90 %   |
| Target Details                |  |
| Target:                       | BOLA   |
| Alternative Name:             | Protein BolA homolog (bolA) (BOLA Products)  |

| Target Details      |   |
|---------------------|---|
| Background:         | Recommended name: Protein BolA homolog  |
| UniProt:            | P43780  |
| Application Details |   |
| Comment:            | The yeast protein expression system is the most economical and efficient eukaryotic system  |
|                     | for secretion and intracellular expression. A protein expressed by the mammalian cell system is   |
|                     | of very high-quality and close to the natural protein. But the low expression level, the high cost  |
|                     | of medium and the culture conditions restrict the promotion of mammalian cell expression  |
|                     | systems. The yeast protein expression system serve as a eukaryotic system integrate the advantages of the mammalian cell expression system. A protein expressed by yeast system |
|                     | could be modificated such as glycosylation, acylation, phosphorylation and so on to ensure the  |
|                     | native protein conformation. It can be used to produce protein material with high added value   |
|                     | that is very close to the natural protein. Our proteins produced by yeast expression system has   |
|                     | been used as raw materials for downstream preparation of monoclonal antibodies.   |
| Restrictions:       | For Research Use only   |
| Handling            |   |
| Format:             | Lyophilized   |
| Concentration:      | 0.2-2 mg/mL   |
| Buffer:             | Tris-based buffer, 50 % glycerol  |
| Handling Advice:    | Repeated freezing and thawing is not recommended. Store working aliquots at 4 °C for up to one week   |
| Storage:            | -20 °C  |
| Storage Comment:    | Store at -20 °C, for extended storage, conserve at -20 °C or -80 °C.  |
