Application Details

for secretion and intracellular expression. A protein expressed by the mammalian cells	gh cost
	•
of very high-quality and close to the natural protein. But the low expression level, the hi	
of medium and the culture conditions restrict the promotion of mammalian cell expres	sion
systems. The yeast protein expression system serve as a eukaryotic system integrate	the
advantages of the mammalian cell expression system. A protein expressed by yeast s	/stem
could be modificated such as glycosylation, acylation, phosphorylation and so on to er	sure the
native protein conformation. It can be used to produce protein material with high adde	d value
that is very close to the natural protein. Our proteins produced by yeast expression sys	tem has
been used as raw materials for downstream preparation of monoclonal antibodies.
