

Datasheet for ABIN1672805 CSF1R ELISA Kit

Image

Overview

1

Quantity:	96 tests
Target:	CSF1R
Binding Specificity:	AA 20-511
Reactivity:	Mouse
Method Type:	Sandwich ELISA
Detection Range:	62.5-4000 pg/mL
Minimum Detection Limit:	62.5 pg/mL
Application:	ELISA

Product Details

Purpose:	Sandwich High Sensitivity ELISA kit for Quantitative Detection of Mouse CSF1R/M-CSFR	
Brand:	PicoKine™	
Sample Type:	Cell Culture Supernatant, Serum, Plasma (heparin), Plasma (EDTA)	
Analytical Method:	Quantitative	
Detection Method:	Colorimetric	
Immunogen:	Expression system for standard: NSO	
	Immunogen sequence: A20-S511	
Specificity:	Expression system for standard: NSO	
	Immunogen sequence: A20-S511	
Cross-Reactivity (Details):	There is no detectable cross-reactivity with other relevant proteins.

Product Details

Sensitivity:	<10pg/mL		
Material not included:	Microplate reader in standard size. Automated plate washer. Adjustable pipettes and pipette		
	tips. Multichannel pipettes are recommended in the condition of large amount of samples in the		
	detection. Clean tubes and Eppendorf tubes. Washing buffer (neutral PBS or TBS). Preparation		
	of 0.01M TBS: Add 1.2g Tris, 8.5g Nacl		

Target Details

Target:	CSF1R
Alternative Name:	CSF1R (CSF1R Products)
Background:	Protein Function: Tyrosine-protein kinase that acts as cell-surface receptor for CSF1 and IL34
	and plays an essential role in the regulation of survival, proliferation and differentiation of
	hematopoietic precursor cells, especially mononuclear phagocytes, such as macrophages an
	monocytes. Promotes the release of proinflammatory chemokines in response to IL34 and
	CSF1, and thereby plays an important role in innate immunity and in inflammatory processes.
	Plays an important role in the regulation of osteoclast proliferation and differentiation, the
	regulation of bone resorption, and is required for normal bone and tooth development. Require
	for normal male and female fertility, and for normal development of milk ducts and acinar
	structures in the mammary gland during pregnancy. Promotes reorganization of the actin
	cytoskeleton, regulates formation of membrane ruffles, cell adhesion and cell migration, and
	promotes cancer cell invasion. Activates several signaling pathways in response to ligand
	binding. Phosphorylates PIK3R1, PLCG2, GRB2, SLA2 and CBL. Activation of PLCG2 leads to 1
	production of the cellular signaling molecules diacylglycerol and inositol 1,4,5- trisphosphate,
	that then lead to the activation of protein kinase C family members, especially PRKCD.
	Phosphorylation of PIK3R1, the regulatory subunit of phosphatidylinositol 3-kinase, leads to
	activation of the AKT1 signaling pathway. Activated CSF1R also mediates activation of the M
	kinases MAPK1/ERK2 and/or MAPK3/ERK1, and of the SRC family kinases SRC, FYN and
	YES1. Activated CSF1R transmits signals both via proteins that directly interact with
	phosphorylated tyrosine residues in its intracellular domain, or via adapter proteins, such as
	GRB2. Promotes activation of STAT family members STAT3, STAT5A and/or STAT5B.
	Promotes tyrosine phosphorylation of SHC1 and INPP5D/SHIP- 1. Receptor signaling is dowr
	regulated by protein phosphatases, such as INPP5D/SHIP-1, that dephosphorylate the recept
	and its downstream effectors, and by rapid internalization of the activated receptor
	Background: CSF1R(Colony stimulating factor 1 receptor),also known as M-CSFR and CD115
	a cell-surface protein encoded, in humans, by the CSF1R gene. The gene is located on long an

	of chromosome 5(5q32) on the Crick(minus) strand. The encoded protein is a tyrosine kinase		
	transmembrane receptor and member of the CSF1/PDGF receptor family of tyrosine-protein		
	kinases. The encoded protein is a single pass type I membrane protein and acts as the re		
	for colony stimulating factor 1, a cytokine which controls the production, differentiation, and		
	function of macrophages. Both CSF1R, and its ligand colony stimulating factor 1 play an		
	important role in the development of the mammary gland and may be involved in the process		
	of mammary gland carcinogenesis.		
	Synonyms: Macrophage colony-stimulating factor 1 receptor,CSF-1 receptor,CSF-1-R,CSF-		
	1R,M-CSF-R,2.7.10.1,Proto-oncogene c-Fms,CD115,Csf1r,Csfmr, Fms,		
	Full Gene Name: Macrophage colony-stimulating factor 1 receptor		
	Cellular Localisation: Cell membrane, Single-pass type I membrane protein . The		
	autophosphorylated receptor is ubiquitinated and internalized, leading to its degradation.		
Gene ID:	12978		
UniProt:	P09581		
Pathways:	RTK Signaling, Inositol Metabolic Process, Cell-Cell Junction Organization		
Application Details			
Application Notes:	Before using Kit, spin tubes and bring down all components to bottom of tube. Duplicate well		
	assay was recommended for both standard and sample testing.		
Comment:	Sequence similarities: Belongs to the protein kinase superfamily. Tyr protein kinase family. CSF-		
	1/PDGF receptor subfamily.		

Tissue Specificity: Widely expressed. .

Plate:	Pre-coated
Protocol:	mouse CSF1R ELISA Kit was based on standard sandwich enzyme-linked immune-sorbent
	assay technology. A monoclonal antibody from rat specific for CSF1R has been precoated onto
	96-well plates. Standards(NSO, A20-S511) and test samples are added to the wells, a
	biotinylated detection polyclonal antibody from goat specific for CSF1R is added subsequently
	and then followed by washing with PBS or TBS buffer. Avidin-Biotin-Peroxidase Complex was
	added and unbound conjugates were washed away with PBS or TBS buffer. HRP substrate
	TMB was used to visualize HRP enzymatic reaction. TMB was catalyzed by HRP to produce a
	blue color product that changed into yellow after adding acidic stop solution. The density of
	yellow is proportional to the mouse CSF1R amount of sample captured in plate.
Assay Procedure	Aliquot 0.1 mL per well of the 4000pg/mL 2000pg/mL 1000pg/mL 500pg/mL 250pg/mL

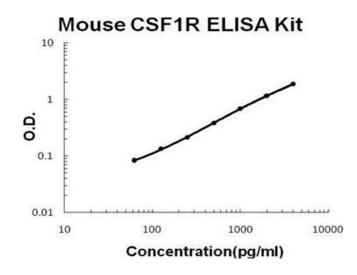

Assay Procedure:

Aliquot 0.1 mL per well of the 4000pg/mL, 2000pg/mL,1000pg/mL, 500pg/mL, 250pg/mL,

	125pg/mL, 62.5pg/mL mouse CSF1R standard solutions into the precoated 96-well plate. Add 0.1 mL of the sample diluent buffer into the control well (Zero well). Add 0.1 mL of each properly diluted sample of mouse cell culture supernates, serum or plasma(heparin, EDTA) to each empty well. See "Sample Dilution Guideline" above for details. It is recommended that each mouse CSF1R standard solution and each sample be measured in duplicate.	
Assay Precision:	 Sample 1: n=16, Mean(pg/ml): 379, Standard deviation: 20.85, CV(%): 5.5 Sample 2: n=16, Mean(pg/ml): 1361, Standard deviation: 62.61, CV(%): 4.6 Sample 3: n=16, Mean(pg/ml): 2468, Standard deviation: 155.5, CV(%): 6.3, Sample 1: n=24, Mean(pg/ml): 413, Standard deviation: 28.5, CV(%): 6.9 Sample 2: n=24, Mean(pg/ml): 1533, Standard deviation: 89, CV(%): 5.8 Sample 3: n=24, Mean(pg/ml): 2766, Standard deviation: 202, CV(%): 7.3 	
Restrictions: Handling	For Research Use only	
Handling Advice:	Avoid multiple freeze-thaw cycles.	
Storage:	-20 °C,4 °C	
Storage Comment:	Store at 4°C for 6 months, at -20°C for 12 months. Avoid multiple freeze-thaw cycles	
Expiry Date:	12 months
