# Datasheet for ABIN1672849 Soluble E-Selectin ELISA Kit

Image

#### Overview

Quantity:	96 tests
Target:	Soluble E-Selectin (sE-Selectin)
Binding Specificity:	AA 22-494
Reactivity:	Rat
Method Type:	Sandwich ELISA
Detection Range:	156-10000 pg/mL
Minimum Detection Limit:	156 pg/mL
Application:	ELISA

### Product Details

Purpose:	Sandwich High Sensitivity ELISA kit for Quantitative Detection of Rat sE-Selectin
Brand:	PicoKine™
Sample Type:	Cell Culture Supernatant, Serum, Plasma (heparin), Plasma (citrate)
Analytical Method:	Quantitative
Detection Method:	Colorimetric
Immunogen:	Expression system for standard: NSO
	Immunogen sequence: W22-P494
Specificity:	Expression system for standard: NSO
	Immunogen sequence: W22-P494
Cross-Reactivity (Details):	There is no detectable cross-reactivity with other relevant proteins.

#### Product Details

Sensitivity:	<10pg/mL
Material not included:	Microplate reader in standard size. Automated plate washer. Adjustable pipettes and pipette
	tips. Multichannel pipettes are recommended in the condition of large amount of samples in the
	detection. Clean tubes and Eppendorf tubes. Washing buffer (neutral PBS or TBS). Preparation
	of 0.01M TBS: Add 1.2g Tris, 8.5g Nacl

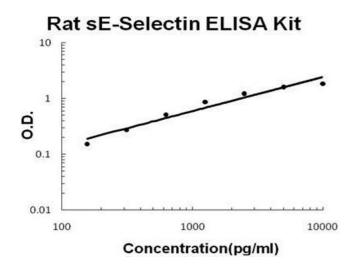

## Target Details

Target:	Soluble E-Selectin (sE-Selectin)
Alternative Name:	sE-Selectin (sE-Selectin Products)
Background:	Protein Function: Cell-surface glycoprotein having a role in immunoadhesion. Mediates in the
	adhesion of blood neutrophils in cytokine-activated endothelium through interaction with
	PSGL1/SELPLG. May have a role in capillary morphogenesis (By similarity)
	Background: E-selectin, also called endothelial-leukocyte adhesion molecule-1(ELAM-1), is a ce
	surface glycoprotein expressed by cytokine-activated endothelium that mediates the adhesion
	of blood neutrophils.1 An increased expression of E-selectin has been observed in the arterial
	endothelium interacting with lymphocytes and macrophages in human atherosclerotic
	lesions.2 E-selectin plays a critical role in mediating tissue-specific homing of T cells into skin,
	and of primitive hematopoietic progenitor cells(HPCs) into bone marrow(BM).3 A structurally
	and functionally related group of genes, lymph node homing receptor(LHR), granule membrane
	protein 140(GMP-140), and endothelial leukocyte adhesion molecule 1(ELAM-1) are shown to
	constitute a gene cluster on mouse and human chromosome 1.4
	Synonyms: E-selectin,CD62 antigen-like family member E,Endothelial leukocyte adhesion
	molecule 1,ELAM-1,Leukocyte-endothelial cell adhesion molecule 2,LECAM2,CD62E,Sele,Elam-
	1,
	Full Gene Name: E-selectin
	Cellular Localisation: Cell membrane, Single-pass type I membrane protein.
Gene ID:	25544
UniProt:	P98105
Application Details	
Application Notes:	Before using Kit, spin tubes and bring down all components to bottom of tube. Duplicate well
	assay was recommended for both standard and sample testing.
Comment:	Sequence similarities: Belongs to the selectin/LECAM family.

Application Details	
Plate:	Pre-coated
Protocol:	rat E-Selectin ELISA Kit is based on standard sandwich enzyme-linked immune-sorbent assay
	technology. A monoclonal antibody from mouse specific for E-Selectin has been precoated
	onto 96-well plates. Standards(NSO, W22-P494) and test samples are added to the wells, a
	biotinylated detection polyclonal antibody from goat specific for E-Selectin is added
	subsequently and then followed by washing with PBS or TBS buffer. Avidin-Biotin-Peroxidase
	Complex is added and unbound conjugates are washed away with PBS or TBS buffer. HRP
	substrate TMB are used to visualize HRP enzymatic reaction. TMB is catalyzed by HRP to
	produce a blue color product that changed into yellow after adding acidic stop solution. The
	density of yellow is proportional to the rat E-Selectin amount of sample captured in plate.
Assay Procedure:	Aliquot 0.1 mL per well of the 10000pg/mL, 5000pg/mL, 2500pg/mL, 1250pg/mL, 625pg/mL,
	312pg/mL, 156pg/mL rat E-Selectin standard solutions into the precoated 96-well plate. Add
	0.1 mL of the sample diluent buffer into the control well (Zero well). Add 0.1 mL of each
	properly diluted sample of rat cell culture supernates, serum or plasma(heparin, citrate) to each
	empty well. See "Sample Dilution Guideline" above for details. It is recommended that each rat
	E-Selectin standard solution and each sample be measured in duplicate.
Assay Precision:	Sample 1: n=16, Mean(ng/ml): 1.1, Standard deviation: 0.044, CV(%): 4
	<ul> <li>Sample 2: n=16, Mean(ng/ml): 2.5, Standard deviation: 0.16, CV(%): 6.4</li> </ul>
	<ul> <li>Sample 3: n=16, Mean(ng/ml): 6.3, Standard deviation: 0.328, CV(%): 5.2,</li> <li>Sample 1: n=24, Mean(ng/ml): 0.0, Standard deviation: 0.044, CV(%): 4.0</li> </ul>
	<ul> <li>Sample 1: n=24, Mean(ng/ml): 0.9, Standard deviation: 0.044, CV(%): 4.9</li> <li>Sample 2: n=24, Mean(ng/ml): 2.3, Standard deviation: 0.168, CV(%): 7.3</li> </ul>
	<ul> <li>Sample 3: n=24, Mean(ng/ml): 7, Standard deviation: 0.448, CV(%): 6.4</li> </ul>
Restrictions:	For Research Use only
Handling	
Handling Advice:	Avoid multiple freeze-thaw cycles.
Storage:	-20 °C,4 °C
Storage Comment:	Store at 4°C for 6 months, at -20°C for 12 months. Avoid multiple freeze-thaw cycles
Expiry Date:	12 months
