## Datasheet for ABIN1674903 CYCT Protein (AA 2-105) (His tag)

| Overview                      |  |
|-------------------------------|--|
| Quantity:                     | 1 mg   |
| Target:                       | CYCT   |
| Protein Characteristics:      | AA 2-105   |
| Origin:                       | Xenopus laevis   |
| Source:                       | Yeast  |
| Protein Type:                 | Recombinant  |
| Purification tag / Conjugate: | This CYCT protein is labelled with His tag.  |
| Application:                  | ELISA  |
| Product Details               |  |
| Sequence:                     | GDAEKGKKI FIQKCAQCHT VEKTGKHKTG PNLWGLFGRK TGQAPGFSYT DANKSKGIVW                                 |
|                               | GEDTLFEYLE NPKKYIPGTK MIFAGIKKKN ERLDLIAYLK KSTSE  |
| Specificity:                  | Xenopus laevis (African clawed frog)   |
| Characteristics:              | Please inquire if you are interested in this recombinant protein expressed in E. coli, mammalien |
|                               | cells or by baculovirus infection. Be aware about differences in price and lead time.            |
| Purity:                       | > 90 %   |
| Target Details                |  |
| Target:                       | CYCT   |
| Alternative Name:             | Cytochrome c, somatic A (cycs-a) (CYCT Products)   |

| Target Details      |  |
|---------------------|--|
| Background:         | Recommended name: Cytochrome c, somatic A  |
| UniProt:            | Q6GQE4   |
| Application Details |  |
| Comment:            | The yeast protein expression system is the most economical and efficient eukaryotic system<br>for secretion and intracellular expression. A protein expressed by the mammalian cell system is<br>of very high-quality and close to the natural protein. But the low expression level, the high cost<br>of medium and the culture conditions restrict the promotion of mammalian cell expression<br>systems. The yeast protein expression system serve as a eukaryotic system integrate the<br>advantages of the mammalian cell expression system. A protein expressed by yeast system<br>could be modificated such as glycosylation, acylation, phosphorylation and so on to ensure the<br>native protein conformation. It can be used to produce protein material with high added value<br>that is very close to the natural protein. Our proteins produced by yeast expression system has<br>been used as raw materials for downstream preparation of monoclonal antibodies. |
| Restrictions:       | For Research Use only  |
| Handling            |  |
| Format:             | Lyophilized  |
| Concentration:      | 0.2-2 mg/mL  |
| Buffer:             | Tris-based buffer, 50 % glycerol   |
| Handling Advice:    | Repeated freezing and thawing is not recommended. Store working aliquots at 4 °C for up to one week  |
| Storage:            | -20 °C   |
| Storage Comment:    | Store at -20 °C, for extended storage, conserve at -20 °C or -80 °C.   |
