## Datasheet for ABIN1676876 IER3 Protein (AA 100-156) (His tag)

Background:

| Overview                      |  |
|-------------------------------|--|
| Quantity:                     | 1 mg   |
| Target:                       | IER3   |
| Protein Characteristics:      | AA 100-156   |
| Origin:                       | Chimpanzee   |
| Source:                       | Yeast  |
| Protein Type:                 | Recombinant  |
| Purification tag / Conjugate: | This IER3 protein is labelled with His tag.  |
| Application:                  | ELISA  |
| Product Details               |  |
| Sequence:                     | M AEEGVPAPLP PEDAPNAASL APTPVSPVLE PFNLTSEPSD YALDLSTFLQ QHPAAF  |
| Specificity:                  | Pan troglodytes (Chimpanzee)   |
| Characteristics:              | Please inquire if you are interested in this recombinant protein expressed in E. coli, mammalien cells or by baculovirus infection. Be aware about differences in price and lead time. |
| Purity:                       | > 90 %   |
| Target Details                |  |
| Target:                       | IER3   |
| Alternative Name:             | Radiation-inducible immediate-early gene IEX-1 (IER3) (IER3 Products)  |

Recommended name: Radiation-inducible immediate-early gene IEX-1.

## Target Details

|                     | Alternative name(s): Immediate early protein GLY96 Immediate early response 3 protein              |
|---------------------|--|
|                     | Alternative hame(3). Infinediate early protein GE1 90 infinediate early response 3 protein         |
| UniProt:            | Q7YR42   |
| Pathways:           | Regulation of Carbohydrate Metabolic Process   |
| Application Details |  |
| Comment:            | The yeast protein expression system is the most economical and efficient eukaryotic system         |
|                     | for secretion and intracellular expression. A protein expressed by the mammalian cell system is    |
|                     | of very high-quality and close to the natural protein. But the low expression level, the high cost |
|                     | of medium and the culture conditions restrict the promotion of mammalian cell expression           |
|                     | systems. The yeast protein expression system serve as a eukaryotic system integrate the            |
|                     | advantages of the mammalian cell expression system. A protein expressed by yeast system            |
|                     | could be modificated such as glycosylation, acylation, phosphorylation and so on to ensure the     |
|                     | native protein conformation. It can be used to produce protein material with high added value      |
|                     | that is very close to the natural protein. Our proteins produced by yeast expression system has    |
|                     | been used as raw materials for downstream preparation of monoclonal antibodies.                    |
| Restrictions:       | For Research Use only  |

## Handling

| Format:          | Lyophilized   |
|------------------|---|
| Concentration:   | 0.2-2 mg/mL   |
| Buffer:          | Tris-based buffer, 50 % glycerol  |
| Handling Advice: | Repeated freezing and thawing is not recommended. Store working aliquots at 4 °C for up to one week |
| Storage:         | -20 °C  |
| Storage Comment: | Store at -20 °C, for extended storage, conserve at -20 °C or -80 °C.                                |
