Application Details

protein expression system is the most economical and efficient eukaryotic system
n and intracellular expression. A protein expressed by the mammalian cell system is
n-quality and close to the natural protein. But the low expression level, the high cost
and the culture conditions restrict the promotion of mammalian cell expression
he yeast protein expression system serve as a eukaryotic system integrate the
s of the mammalian cell expression system. A protein expressed by yeast system
odificated such as glycosylation, acylation, phosphorylation and so on to ensure the
ein conformation. It can be used to produce protein material with high added value
close to the natural protein. Our proteins produced by yeast expression system has
as raw materials for downstream preparation of monoclonal antibodies.
