Background:	Synonyms: C20orf202, CT202_HUMAN, Uncharacterized protein C20orf202.

## Target Details

---

Background: C20orf202 is a 122 amino acid protein that is pending further characterization. The gene encoding C20orf202 maps to human chromosome 20. Comprising approximately 2 % of the human genome, chromosome 20 contains nearly 63 million bases that encode over 600 genes, some of which are associated with Creutzfeldt-Jakob disease, amyotrophic lateral sclerosis, spinal muscular atrophy, ring chromosome 20 epilepsy syndrome and Alagille syndrome. Additionally, chromosome 20 contains a region with numerous genes which are thought to be important for seminal production and may be potential targets for male contraception.
