TSG23, Uncharacterized protein C20orf165.	
Background: Representing about 2 % of human DNA, chromosome 20 consists of	
approximately 63 million bases and 600 genes. Chromosome 20 contains a region w	vith
numerous genes expressed in the epididymis, which are thought important for semi	nal
production, and some viewed as potential targets for male contraception. The PRNP	gene
encoding the prion protein associated with spongiform encephalopathies, like Creutz	zfeldt-
Jakob disease, is found on chromosome 20. Amyotrophic lateral sclerosis, spinal m	uscular
atrophy, ring chromosome 20 epilepsy syndrome and Alagille syndrome are also ass	ociated
with chromosome 20. The C20orf165 gene product has been provisionally designate	ed
C20orf165 pending further characterization.
