#### Target Details

Background:Synonyms: Chromosome 20 open reading frame 96, dJ1103G7.2, Uncharacterized protein<br/>C20orf96, CT096\_HUMAN.Background: Representing about 2 % of human DNA, chromosome 20 consists of<br/>approximately 63 million bases and 600 genes. Chromosome 20 contains a region with<br/>numerous genes expressed in the epididymis, which are thought important for seminal<br/>production, and some viewed as potential targets for male contraception. The PRNP gene<br/>encoding the prion protein associated with spongiform encephalopathies, like Creutzfeldt-<br/>Jakob disease, is found on chromosome 20. Amyotrophic lateral sclerosis, spinal muscular<br/>atrophy, ring chromosome 20 epilepsy syndrome and Alagille syndrome are also associated<br/>with chromosome 20. The C20orf96 gene product has been provisionally designated C20orf96<br/>pending further characterization.
