Target Details

Target:	ETFDH
Alternative Name:	ETFDH (ETFDH Products)
Background:	Synonyms: Electron transfer flavoprotein ubiquinone oxidoreductase, Electron transfer

Target Details

flavoprotein-ubiquinone oxidoreductase, electron transferring flavoprotein dehydrogenase, Electron-transferring-flavoprotein dehydrogenase, ETF dehydrogenase, ETF QO, ETF ubiquinone oxidoreductase, ETF-QO, ETF-ubiquinone oxidoreductase, ETFD_HUMAN, Etfdh, mitochondrial. Background: Electron-transferring-flavoprotein dehydrogenase in the inner mitochondrial membrane accepts electrons from electron-transfer flavoprotein which is located in the mitochondrial matrix and reduces ubiquinone in the mitochondrial membrane. The protein is synthesized as a 67- kDa precursor which is targeted to mitochondria and processed in a single step to a 64- kDa mature form located in the mitochondrial membrane. Deficiency in electron-transferring-flavoprotein dehydrogenase have been demonstrated in some patients with type II glutaricacidemia. [provided by RefSeq, Jul 2008].
