Background:	Synonyms: C76981, Dentin matrix protein 4, DKFZp547C074, DMP-4, DMP4, DMP4_HUMAN,
	Extracellular serine/threonine protein kinase Fam20C, Fam20C, Family with sequence similarity
	20 member C, GEF CK, Golgi enriched fraction casein kinase, Protein FAM20C, RNS antibod.
	Background: The FAM20 proteins are a family of secreted proteins that regulate differentiation
	and function of hematopoietic and other tissues. FAM20C, also known as DMP4 (Dentin matrix
	protein 4), is a 570 amino acid secreted protein that binds calcium and may play a role in dentin
	mineralization. Defects in the gene encoding FAM20C are the cause of Raine syndrome (Lethal
	osteosclerotic bone dysplasia), an autosomal recessive osteosclerotic bone dysplasia, that is
	characterized by generalized osteosclerosis, microencephaly and craniofacial dysplasia.
	Usually, affected individuals survive only days or weeks. The mutations of the FAM20C gene
	include four nonsynomous base changes and four splice-site changes that have a detrimental
	affect on splicing.
Gene ID:	56975
