Datasheet for ABIN1693318 anti-Cytohesin 2 antibody (AA 21-120) (AbBy Fluor® 350)

Overview

Quantity:	100 µL
Target:	Cytohesin 2 (CYTH2)
Binding Specificity:	AA 21-120
Reactivity:	Human, Rat
Host:	Rabbit
Clonality:	Polyclonal
Conjugate:	This Cytohesin 2 antibody is conjugated to AbBy Fluor® 350
Application:	Western Blotting (WB), Immunofluorescence (Cultured Cells) (IF (cc)), Immunofluorescence (Paraffin-embedded Sections) (IF (p))

Product Details

Immunogen:	KLH conjugated synthetic peptide derived from human Cytohesin 2
lsotype:	lgG
Cross-Reactivity:	Human, Rat
Predicted Reactivity:	Mouse,Dog,Sheep,Pig,Horse,Chicken
Purification:	Purified by Protein A.
Target Details	
Target:	Cytohesin 2 (CYTH2)
Alternative Name:	Cytohesin 2 (CYTH2 Products)

Target Details	
Background:	Synonyms: ARF exchange factor, ARF nucleotide binding site opener, Arno, ARNO protein,
	CLM2, CTS18, CTS18.1, Cyth2, Cytohesin 2, MGC137537, MGC80440, PH, SEC7 and coiled-coil
	domain-containing protein 2, Pleckstrin homology Sec7 and coiled coil domains 2, Pleckstrin
	homology Sec7 and coiled coil domains protein 2, PSCD2, PSCD2L, PSCD2L, formerly, Sec7,
	SEC7 homolog B, Sec7B, SEC7L, Sec7p L, Sec7p-like, Sec7pL, CYH2_HUMAN.
	Background: The ADP-ribosylation factor (Arf) family comprises a group of structurally and
	functionally conserved 21 kDa proteins, which are members of the Ras superfamily of
	regulatory GTP-binding proteins. Arf is involved in intracellular protein traffic to and within the
	Golgi complex. Arf has a number of disparate activities including maintenance of organelle
	integrity, assembly of coat proteins, as a co-factor for cholera toxin and as an activator of
	phospholipase D. Like other small GTPases, Arf is found to be active when bound to GTP and
	inactive when bound to GDP. Arf?s activation is dependent upon guanine nucleotide exchange
	factors (GEFs) which increase the rate of exchange of bound GDP with GTP. All GEFs have a
	highly conserved Sec7 domain. GEF activity lies in the Sec7 domain and this activity has been
	shown to be inhibited by the fungal metabolite brefeldin-A (BFA). A small group of GEFs which
	are insensitive to brefeldin-A (BFA) include cytohesin-1 (B2-1), cytohesin-2 (ARNO), cytohesin-3
	(ARNO3), and cytohesin-4. All cytohesins function in the cell periphery and contain a pleckstrin
	homology (PH) domain. The PH domain has been shown to interact with phosphatidylinositol
	3,4,5-triphosphate and is believed to promote membrane targeting of the cytohesins.
	Recruitment of the cytohesins to the membranes can occur in response to tyrosine kinase
	receptor activation. This response appears to require the activation of phosphatidylinositol 3-
	kinase (PI 3-kinase).
Gene ID:	9266
Application Details	
Application Notes:	IF(IHC-P) 1:50-200
	IF(IHC-F) 1:50-200
	IF(ICC) 1:50-200
Restrictions:	For Research Use only
Handling	
Format:	Liquid
Concentration:	1 μg/μL

Buffer:	Aqueous buffered solution containing 0.01M TBS (pH 7.4) with 1 % BSA, 0.03 % Proclin300 and 50 % Glycerol.
Preservative:	ProClin
Precaution of Use:	This product contains ProClin: a POISONOUS AND HAZARDOUS SUBSTANCE, which should be handled by trained staff only.
Storage:	-20 °C
Storage Comment:	Store at -20°C. Aliquot into multiple vials to avoid repeated freeze-thaw cycles.
Expiry Date:	12 months
