	Background: The bromodomain-containing proteins include BRD2, BRD3, BRD4 and BRDT.	
	BRD2 (RING3 protein) is a mitogen-activated nuclear protein whose gene is located in the	
	human MHC II region, suggesting its relation to HLA-associated diseases. The gene encoding	
	BRD3 (RING3-like protein) contains two bromodomains and maps to chromosome 9q34. BRD4	
	(HUNK1 protein) is a nuclear protein involved in the regulation of chromosomal dynamics	
during mitosis. The testis-specific bromodomain protein BRDT contains a PEST se		
	indicating that it undergoes rapid intracellular degradation. The bromodomain-containing	
	proteins are ubiquitously expressed.
