Target Details

Target:	ISR-beta
Abstract:	ISR-beta Products
Background:	Synonyms: HHF5, CD220, Insulin receptor, IR, INSR

Target Details

Background: After removal of the precursor signal peptide, the insulin receptor precursor is post-translationally cleaved into two chains (alpha and beta) that are covalently linked. Binding of insulin to the insulin receptor (INSR) stimulates glucose uptake. Two transcript variants encoding different isoforms have been found for this gene. [provided by RefSeq, Jul 2008]
