Target Details Background: Synonyms: Docking protein 7, DOK 7, DOK7, DOK7_HUMAN, Downstream of tyrosine kinase 7, Protein Dok-7. Background: The downstream of kinase family (Dok1-7) are members of a class of docking? proteins that include the tyrosine kinase substrates IRS-1 and Cas, which contain multiple tyrosine residues and putative SH2 binding sites. Based on their similarities, the Dok family of proteins can be divided into three subgroups: Dok-1/2/3, Dok-4/5/6 and Dok-7. Through its interaction with muscle-specific receptor kinase (MuSK), Dok-7 is crucial for neuromuscular synaptogenesis and for MuSK activation. Mice lacking Dok-7 do not form neuromuscular synapses nor acetylcholine receptor clusters. Mutations in the Dok-7 gene can cause congenital myasthenic syndromes (CMA) recessively inherited disorders characterized by muscle weakness. Pathways: Skeletal Muscle Fiber Development
