	containing protein 3, FAST kinase domains 3, Fastkd3, FLJ23274, MGC142123, MGC5297.
	Background: FAKD3 is a member of a small family of Fas-activated serine/threonine kinase
	domain (FASTKD) containing proteins that share an amino terminal mitochondrial targeting
	domain and multiple carboxy terminal FAST domains as well as a putative RNA-binding RAP
	domain. The members of this family are ubiquitously expressed and are generally most
	abundant in mitochondria-enriched tissues such as heart, skeletal muscle and brown-adipose
	tissue. Some members of this protein family may play a role in apoptosis. The protein encoded
	by this gene interacts with components of the mitochondrial respiratory and translation
	networks. A pseudogene of this gene is also present on chromosome 5. Alternative splicing
	results in multiple transcript variants.
