Target Details

Background:	<p>Synonyms: LAMTOR3, Late endosomal/lysosomal adaptor and MAPK and MTOR activator 3, LTOR3_HUMAN, MAP2K1IP1, MEK binding partner 1, MEK partner 1, MEK-binding partner 1, Mitogen activated protein kinase kinase 1 interacting protein 1, Mitogen-activated protein kinase kinase 1-interacting protein 1, Mitogen-activated protein kinase scaffold protein 1, MP1, Ragulator complex protein LAMTOR3.</p> <p>Background: This gene encodes a scaffold protein that functions in the extracellular signal-regulated kinase (ERK) cascade. The protein is localized to late endosomes by the mitogen-activated protein-binding protein-interacting protein, and binds specifically to MAP kinase kinase MAP2K1/MEK1, MAP kinase MAPK3/ERK1, and MAP kinase MAPK1/ERK2. Studies of the orthologous gene in mouse indicate that it regulates late endosomal traffic and cell proliferation. Alternatively spliced transcript variants encoding multiple isoforms have been observed for this gene. A pseudogene of this gene is located on the long arm of chromosome 13.
