	Intraflagellar transport protein 122 homolog, SPG, WD repeat domain 10, WD repeat-containing
	protein 10, WD repeat-containing protein 140, WDR10, WDR10p, WDR140.
	Background: IFT122 is a member of the WD repeat protein family. WD repeats are minimally
	conserved regions of approximately 40 amino acids typically bracketed by gly-his and trp-asp
	(GH-WD), which may facilitate formation of heterotrimeric or multiprotein complexes. Members
	of this family are involved in a variety of cellular processes, including cell cycle progression,
	signal transduction, apoptosis, and gene regulation. This cytoplasmic protein contains seven
	WD repeats and an AF-2 domain which function by recruiting coregulatory molecules and in
	transcriptional activation. Alternate transcriptional splice variants, encoding different isoforms,
	have been characterized.
Pathways:	Tube Formation, Embryonic Body Morphogenesis
