|                     | Background: CatSpers (cation channel, sperm associated proteins) are ion transport proteins   |  |  |
|                     | located on the surface of sperm cells in the principal piece of the sperm tail. CatSpers are vital to sperm motility, fertilization and cAMP-mediated calcium influx in sperm. There are four |  |  |
|                     |   |  |  |
|                     | CatSper proteins in mammalian sperm, namely CatSper (or CatSper1), CatSper2, CatSper3 and   |  |  |
|                     | CatSper4. CatSper proteins contain a single, six-transmembrane-spanning segment and exhibi  |  |  |
|                     | the voltage-dependent Ca2+ channel four-repeat structure. CatSper proteins are believed to  |  |  |
|                     | assemble into a heterotetrameric complex, forming an alkalinization-activated Ca2+-selective  |  |  |
