rarget Detailo		
	Stanniocalcin2, STC 2, STC related protein, STC-2, STC-related protein, STC2, STC2_HUMAN,	
	STCRP.	
	Background: Stanniocalcin 1 (STC1) and stanniocalcin 2 (STC2) are mammalian peptide	
	hormones that were previously considered to be present only in bony fish, where they are	
	involved in calcium homeostasis. STC1 plays a role in calcium and phosphate homoeostasis	
	and is phosphorylated in vitro by protein kinase C, and STC2 is phosphorylated in vitro by	
	casein kinase II (CK2). A human fibrosarcoma cell line, HT1080, expresses both STC1 and	
	STC2 as secreted phosphoproteins in vivo, with STC2 being phosphorylated by an ecto-CK2-like	
	enzyme. STC1 and STC2 have opposite effects on calcium and phosphate homeostasis,	
	namely anti-hypercalcemic and anti-hypocalcemic actions, respectively. STC1 and STC2 are	
	detected in human adrenal tumors, such as pheochromocytoma, differentiated neuroblastoma	
	aldosterone-producing adenoma, and in cultured adrenal tumor cells (rat pheochromocytoma	
	PC-12 cells and human neuroblastoma NB-1 cells).
