

## Datasheet for ABIN1696847 anti-FANCA antibody (AA 461-560) (AbBy Fluor® 555)

Overview

Quantity:	100 µL
Target:	FANCA
Binding Specificity:	AA 461-560
Reactivity:	Rat
Host:	Rabbit
Clonality:	Polyclonal
Conjugate:	This FANCA antibody is conjugated to AbBy Fluor® 555
Application:	Immunofluorescence (Cultured Cells) (IF (cc)), Immunofluorescence (Paraffin-embedded
	Sections) (IF (p))

## Product Details

Immunogen:	KLH conjugated synthetic peptide derived from human FANCA
lsotype:	lgG
Cross-Reactivity:	Rat
Predicted Reactivity:	Human,Mouse,Chicken,Rabbit
Purification:	Purified by Protein A.
Target Details	
Target:	FANCA
Alternative Name:	FANCA (FANCA Products)

Target Details	
Background:	Synonyms: FA 1, FA, FA H, FA1, FAA, FACA, FAH, Fanca, FANCA_HUMAN, FANCH, Fanconi
	anemia complementation group A, Fanconi anemia complementation group H, Fanconi anemia
	group A protein, Fanconi anemia type 1, MGC75158, Protein FACA.
	Background: Fanconi anemia (FA) is an autosomal recessive disorder characterized by bone
	marrow failure, birth defects and chromosomal instability. At the cellular level, FA is
	characterized by spontaneous chromosomal breakage and a unique hypersensitivity to DNA
	cross-linking agents. At least eight complementation groups (A-G) have been identified and six
	FA genes (for subtypes A, C, D2, E, F and G) have been cloned. The FA proteins lack sequence
	homologies or motifs that could point to a molecular function. The cellular accumulation of FA
	proteins, including FANCA and FANCG, is subject to regulation by TNF alpha signaling.
	Phosphorylation of FANC (Fanconi anemia complementation group) proteins is thought to be
	important for the function of the FA pathway. FANCA, also known as FACA and FANCH,
	associates with the Brm-related gene 1 (BRG1) product, a subunit of the SWI/SNF complex
	which remodels chromatin structure through a DNA-dependent ATPase activity. FANCA is
	mainly expressed in lymphoid tissues, testis and ovary. The amino-terminal region of the
	FANCA protein is required for FANCG binding, FANCC binding, nuclear localization and
	functional activity of the complex. The human FANCA gene maps to chromosome 16q24.3 and
	encodes a 1,455 amino acid protein.
Gene ID:	2175
Pathways:	DNA Damage Repair
Application Details	
Application Notes:	IF(IHC-P) 1:50-200
	IF(IHC-F) 1:50-200
	IF(ICC) 1:50-200
Restrictions:	For Research Use only
Handling	
Format:	Liquid
Concentration:	1 μg/μL
Buffer:	Aqueous buffered solution containing 0.01M TBS ( pH 7.4) with 1 % BSA, 0.03 % Proclin300 and
	50 % Glycerol.
Preservative:	ProClin

Handling	
Precaution of Use:	This product contains ProClin: a POISONOUS AND HAZARDOUS SUBSTANCE, which should be handled by trained staff only.
Storage:	-20 °C
Storage Comment:	Store at -20°C. Aliquot into multiple vials to avoid repeated freeze-thaw cycles.
Expiry Date:	12 months
