### **Target Details**

Target:	DAPL1
Alternative Name:	DAPL1 (DAPL1 Products)
Background:	Synonyms: dapL1, DAPL1_HUMAN, death associated protein-like 1, Death-associated protein-

like 1, Early epithelial dferentiation-associated protein, EEDA, RP23-151F21.4.
Background: In contrast to growth factors which promote cell proliferation, FAS ligand (FAS-L)
and the tumor necrosis factors (TNFs) rapidly induce apoptosis. Cellular response to FAS-L and
TNF is mediated by structurally related receptors containing a conserved cytoplasmic region
called the death domain?. DAPL1 (Death-associated protein-like 1), also known as EEDA (Early
epithelial differentiation-associated protein), is a 107 amino acid protein that is expressed in
hair follicles and is thought to function in a similar manner to DAP-1, possibly participating in
the early stages of epithelial differentiation and/or apoptosis.
