	containing protein 14A, BTB/POZ domain-containing protein 14A, BTBD 14A, BTBD14, NAC-2,
	NACC2, NACC2_HUMAN, Nucleus accumbens-associated protein 2.
	Background: BTBD14A is a 587 amino acid protein that contains one BTB/POZ domain. The
	BTB/POZ domain mediates homomeric and heteromeric POZ-POZ interactions and is common
	to transcriptional regulators involved in chromatin modeling. In several BTB/POZ containing
	proteins, including BCL-6 and the promyelocytic leukemia zinc-finger (PLZF) oncoprotein, this
	domain interacts with the SMRT/N-CoR-mSin3A HDAC complex and is directly involved in
	repressing and silencing gene transcription. When this domain is deleted, as with the oncogenic
	PLZF-RAR chimera of promyelocytic leukemias, this transcriptional repression is attenuated.
	This suggests that BTBD14A may play a role in transcription regulation.
