	KIAA1337, Patched domain-containing protein 2, Protein dispatched homolog 3, Ptchd2,
	PTHD2_HUMAN, RGD1305820, RND-type protein RNDEu-2, RNDEu-2, patched domain
	containing 2, RP23-157B15.1.
	Background: PTCHD2 is a 1,392 amino acid multi-pass membrane protein that contains one
	SSD (sterol-sensing) domain and belongs to the patched family. Expressed in retina, brain and
	testis, PTCHD2 localizes to endoplasmic reticulum and colocalizes with cholesterol. PTCHD2
	overexpression leads to increased cholesterol levels, suggesting that PTCHD2 may play a role
	in cholesterol homeostasis. PTCHD2 is further hypothesized to act as a link between thyroid
	hormone and cholesterol metabolism. Existing as two alternatively spliced isoforms, PTCHD2
	is thought to assist in the release of lipid-anchored secreted proteins and is encoded by a gene
	that maps to human chromosome 1p36.22.
