	Protein 72.1, Trans-Golgi p230.		
	Background: Golgin 245 is also known as p230, GCP2, GOLG or golgi autoantigen and is a 2,230		
	amino acid protein that is expressed as three isoforms. Golgin 245 is localized to the cytoplasm		
	in cells and is a member of the golgin family, all of which are peripheral membrane proteins		
	associated with the Golgi complex. Golgin 245 has a carboxyl-terminal GRIP domain, which		
	attaches to the trans-Golgi network (TGN) and TGN-derived vesicles. It is thought that the		
	interaction that takes place between golgin 245 and MACF1, which cross-links microtubules to		
	the Actin cytoskeleton, allows proteins to be transported from the TGN to the cell periphery.		
	against golgin 245 are associated with two chronic disorders known as Sjren's syndrome and		
	Hepatitis B.
