Alternative Name:	APOBEC2 ( <a href="#">APOBEC2 Products</a> )
Background:	Synonyms: Apolipoprotein B mRNA editing enzyme catalytic polypeptide 2, Apolipoprotein B

## Target Details

mRNA editing enzyme catalytic polypeptide like 2, ARCD1, ARP1, MGC128604, ABEC2\_HUMAN.

Background: APOBEC2 is a 224 amino acid protein that belongs to the cytidine and deoxycytidylate deaminase family. Expressed exclusively in heart and skeletal muscle, APOBEC2 is thought to be a probable C (cytidine) to U (uridine) editing enzyme. However, unlike other members of the family, such as APOBEC1, which mediates the editing of apolipoprotein (apo) B mRNA, APOBEC2 does not display any detectable apoB mRNA editing activity. Also, APOBEC2 has been shown to have low, but definite, intrinsic cytidine deaminase activity.
