## Target Details

Background:	<p>Synonyms: Dual specificity protein phosphatase 5, Dual specificity protein phosphatase hVH 3, Dual specificity protein phosphatase hVH3, DUSP 5, DUSP, HVH 3, HVH3, Serine/threonine specic protein phosphatase, VH 3, VH1 like phosphatase 3, VH3, DUS5_HUMAN.</p> <p>Background: Dual specificity phosphatases (DSPs) are a subclass of the protein tyrosine phosphatase (PTP) gene superfamily, which are selective for dephosphorylating critical phosphothreonine and phosphotyrosine residues within MAP kinases. DSP gene expression is induced by a host of growth factors and/or cellular stresses, thereby negatively regulating MAP kinase superfamily members including MAPK/ERK, SAPK/JNK and p38. The members of the dual-specificity phosphatase protein family include MKP-1/CL100 (3CH134), MKP-2, MKP-3, MKP-4, MKP-5, MKP-6, MKP-7, MKP-X, VHR, VHY, PAC1, hVH-3 (B23), hVH-5, PYST2, DUSP1, DUSP5, DUSP8, PIR1 and SKRP1. DUSP5 is a nuclear phosphoprotein that displays phosphatase activity toward several different substrates. It shows the highest relative activity toward ERK1.</p>
