Background: LRRFIP2 is a 721 amino acid protein that belongs to the LRRFIP family.

Ubiquitously expressed, LRRFIP2 acts as an activator of the Wnt signaling pathway and as a positive regulator of NF_Β activity. LRRFIP2 may be involved in regulating cytokine production in macrophages, suggesting a functional role in the TLR4-mediated inflammatory response.

Three isoforms of LRRFIP2 exists due to alternative splicing events.
