Background:	Synonyms: CREB regulated transcription coactivator 3, CREB-regulated transcription

Target Details

coactivator 3, CRTC 3, CRTC3, CRTC3_HUMAN, FLJ21868, TORC 3, TORC-3, TORC3, Transducer of CREB protein 3, Transducer of regulated cAMP response element binding protein CREB 3, Transducer of regulated cAMP response element binding protein 3, Transducer of regulated cAMP response element-binding protein 3, Transducer of regulated CREB protein 3.

Background: TORC3 is a 619 amino acid protein that localizes to both the cytoplasm and the nucleus and belongs to the TORC family. Expressed in lung tissue and B and T lymphocytes, as well as in colon, brain, ovary, kidney, prostate, colon and heart, TORC3 functions as a transcriptional coactivator for CREB-1, thereby regulating the expression of CREB-activated genes, and is also thought to activate the SIK/TORC signaling pathway. TORC3 exists as multiple alternatively spliced isoforms and, in addition to its role in transcriptional activation, is thought to induce mitochondrial biogenesis, specifically in muscle cells.
