antibodies

## Datasheet for ABIN1701016 anti-Destrin antibody (AA 75-165) (Biotin)

Overview

Quantity:	100 µL	
Target:	Destrin (DSTN)	
Binding Specificity:	AA 75-165	
Reactivity:	Human	
Host:	Rabbit	
Clonality:	Polyclonal	
Conjugate:	This Destrin antibody is conjugated to Biotin	
Application:	Western Blotting (WB), ELISA, Immunohistochemistry (Paraffin-embedded Sections) (IHC (p)), Immunohistochemistry (Frozen Sections) (IHC (fro))	

## Product Details

Immunogen:	KLH conjugated synthetic peptide derived from human Destrin
Isotype:	lgG
Predicted Reactivity:	Human,Mouse,Rat,Dog,Cow,Horse,Rabbit,Monkey
Purification:	Purified by Protein A.
Target Details	

Target:	Destrin (DSTN)	
Alternative Name:	Destrin (DSTN Products)	
Background:	Synonyms: 2610043P17Rik, ACTDP, Actin depolymerizing factor, Actin-depolymerizing factor,

ADF, AU042046, bA462D18.2, corn1, DEST_HUMAN, Destrin actin depolymerizing factor,
Destrin, DSN, Dstn, Sid 23, sid23p.

Background: Actin-depolymerizing factor (ADF), also known as destrin, is a member of the ADF/Cofilin/destrin superfamily that has the ability to rapidly depolymerize F-Actin in a stoichiometric manner. The Actin-depolymerizing activity of ADF is reversibly controlled by changes in KCl concentration but is insensitive to calcium concentration. ADF depolymerizes F-Actin by interacting directly with F-Actin protomers. ADF shares 71 % sequence homology with Cofilin, however the two proteins differ in their interaction with Actin. The difference in the function of ADF and Cofilin results from the subtle difference in their amino acid sequence rather than possible differences in posttranslational modifications. As a result of different cleavage sites on ADF and Cofilin, the proteins differ in their overall tertiary folds. Sensitivity to polyphosphoinositides may be a common feature in vitro among Actin-binding proteins such as ADF and Cofilin that can bind to G-Actin and regulate the state of Actin polymerization. ADF and Cofilin are Actin-depolymerizing proteins whose activities are possibly regulated by their phosphorylation/dephosphorylation.

Gene ID:

11034

## **Application Details**

Application Notes:	WB 1:300-5000	
	IHC-P 1:200-400	
	IHC-F 1:100-500	
Restrictions:	For Research Use only	
Handling		
Format:	Liquid	
Concentration:	1 μg/μL	
Buffer:	Aqueous buffered solution containing 0.01M TBS ( pH 7.4) with 1 % BSA, 0.03 % Proclin300 and	
	50 % Glycerol.	
Preservative:	ProClin	
Precaution of Use:	This product contains ProClin: a POISONOUS AND HAZARDOUS SUBSTANCE, which should be	
	handled by trained staff only.	
Storage:	-20 °C
