Background: This gene encodes a member of the epidermal growth factor(EGF) repeat superfamily. Members of this superfamily arecharacterized by the presence of EGF-like repeats and are ofteninvolved in the regulation of cell cycle, proliferation, and developmental processes. The gene product contains a signal peptide, suggesting that it is secreted, an EGF repeat regionconsisting of 4 complete EGF-like repeats and 1 partial EGF-likerepeat, 3 of which have a calcium-binding consensus sequence, anarg-gly-asp integrin association motif, and a MAM domain, which is believed to have an adhesive function. This gene is expressed early during development, and its expression has been detected in lungand meningioma tumors. [provided by RefSeq, Jul 2008].
